Product Description

The Nano-Align6 is a six axis closed loop, piezo nanopositioning system with a large center aperture. The Nano-Align6 is ideal for alignment applications which require three linear axes of motion (X, Y, Z) combined with rotational motion about each axis. The large aperture provides excellent access for microscopy optics, sample holders, and probe placement. The Nano-Align6 includes internal position sensors on every axis using Mad City Labs' proprietary PicoQ[®] technology for absolute position measurement and picometer/nanoradian accuracy under closed loop control.

The Nano-Align6 is a unique product combining linear motion with precision rotational motion.
